

# Envoy E Series

News Release - 29 March 2016

## **MegaVoice Unveils New Line of Advanced Solar Audio Players Including the World's First Solar Audio Recorder/Player/FM Radio**

MegaVoice, creator of the world's first solar audio Bible, is pleased to announce the release of the Envoy E Series, its newest line of four advanced solar audio players. Included in this series is a combination solar audio recorder/player/FM radio, the first of its kind.

"The Envoy E Series retains the clean visual style of our ever-popular Envoy S, while offering our ministry partners a powerful suite of new audio features to choose from," states MegaVoice CEO, Charles Cibene. "Of course, we will continue to offer the Envoy S and S Dual solar players, but the feature-rich E Series will provide our ministry partners with more ways to reach oral learners than ever before."

Audio content on each Envoy E Series devices' internal memory is tamperproof. And, the same hard-shell technology built into the Envoy S and S Dual players remains standard fare. Power and volume controls have been repositioned to the player's side making room for new feature buttons on the intuitive, navigation keypad.

Depending on a ministry's communication needs, the Envoy E Series offers four new devices to choose from:

**Envoy Elite**

**Envoy Echo**

**Envoy Equip**

**Envoy Ember**

### **Standard Features for All Envoy E Series Audio Devices**

- Built-in LED flashlight (torch) with three levels of brightness that can be activated while player is on or off
- 8 GB of internal memory, allowing for up to 1,600 hours of audio content
- microSD™ card reader, extending audio recording and playback time via memory cards
- Stereo headphone jack for superior Hi-Fi, CD quality sound
- Variable playback speed control. Listeners can now speed up or slow down audio playback
- Micro USB port, making charging connections more universal
- Raised keypad buttons, ensuring fingertip sensitivity for easy navigation of audio. Ideal for oral learners, blind, and visually impaired

## **Meet the Envoy Elite - The World's First Solar Audio Recorder/Player/FM Radio**

### **Envoy Elite**

The Envoy Elite is a combination solar audio recorder/player with variable playback speed control, FM stereo radio receiver, LED flashlight (torch) and *microSD*<sup>™</sup> card reader.

Listen to hundreds of hours of Scripture audio content on the Elite's internal memory, or extend player content endlessly with memory cards in its *microSD*<sup>™</sup> card reader. The Elite is ideal for oral learners and blind or visually impaired people, because the playback speed can be easily adjusted for slow, normal, and faster listening speeds.

Want to share your recently translated Bible story or chapter with your people group? The record function makes it quick and easy with only a couple presses of the record button. The recorder is also ideal for adding personal audio notes and messages for listening later. Whether someone is recording a sermon at church or voices on the mission field, the Elite offers unique audio solutions.

The Elite's FM radio can quickly scan for available stations and bookmark up to five favorite frequencies.

All of these amazing features are yours on the Envoy Elite at a fraction of the cost of commercially available audio recording devices.

### **Envoy Echo**

The Envoy Echo is a combination solar audio recorder/player with variable playback speed control, LED flashlight (torch) and *microSD*<sup>™</sup> card reader. The device combines solar audio recorder and player into one easy-to-use communications tool. Perfect for those who listen to pre-recorded content or record their own audio notes and messages for later listening.

Missionaries working in remote areas tell us they are very excited about the Echo's features because they can easily record cultural analysis, language pronunciation, as well as stories and notes for later reference. All of these amazing features are available on the Echo at a fraction of the cost of commercially available MP3 recorders which have neither variable playback speed nor solar power. For oral learners and those who are blind or visually impaired, the Echo solar recorder/player is both powerful and cost effective.

### **Envoy Equip**

The Envoy Equip is a combination solar audio player with variable playback speed control, FM stereo radio receiver, LED flashlight (torch) and *microSD*<sup>™</sup> card reader. This device is ideal for use in emergency situations where FM radio stations keep the public informed. And of course, the Equip can also be used to distribute tamperproof, pre-recorded humanitarian messages.

The Equip is also well suited for helping ministry partners reach those living near Christian radio stations. Up to five favorite FM radio station frequencies can be bookmarked, and the player can be loaded with hundreds of hours of audio Scripture content.

The Equip's LED flashlight (torch) will prove very useful in situations where power outages occur, or where there is no

power source at all. That is the beauty of a solar-powered audio player with an on-board FM radio and LED flashlight. For blind and visually impaired people, we have also added a variable playback speed control allowing listeners to select their preferred listening speed of normal, faster or slower.

### **Envoy Ember**

The Envoy Ember is a combination solar audio player with variable playback speed control, LED flashlight (torch) and *microSD*<sup>™</sup> card reader. Even though the Ember is our basic E Series audio player, it still offers features superior to those of any other solar-powered device available.

For example, the Ember comes with 8 GB of tamperproof internal memory. It has a built-in LED flashlight (torch) with three levels of brightness and a raised button keypad for intuitive navigation – even in complete darkness. And finally, the *microSD*<sup>™</sup> card reader gives ministry partners virtually unlimited audio capacity via memory cards.

“I would like to thank all the missionaries and ministry partners who have given us so much valuable feedback and encouragement in the development of this new E Series of solar audio communications tools,” states Charles Cibene. “I pray the Lord will be glorified in all you do as you use our devices to reach oral learners everywhere.”
